State Introduces New Commercial Electric Water Heaters

The new units feature heavy-duty elements and an advanced electronic control

Ashland City, Tenn. (December 22, 2008) – State Water Heaters has introduced its new line of commercial electric water heaters, the Sandblaster® CSB series and the Statesman™ SSE series. The CSB units are available with a Surface Mount Thermostat (CSB-S) or an Immersion Mount Thermostat (CSB-I) and are used for standard commercial applications. The SSE units are used for heavy-duty commercial applications.

The CSB-S and CSB-I models now come standard with 24K gold plated elements. The new element provides five times the scaling resistance of standard elements. The SSE uses heavy-duty incoloy elements that also provide excellent protection against oxidation and scaling.

Superior durability is further ensured through State's corrosion-resistant tanks, constructed with commercial quality glass lining and heavy-duty anode rods.

The CSB-I and SSE units both have a new advanced electronic control panel that features an eye-level, user-friendly LCD display with plain English diagnostics, presenting users with straightforward unit operating information and precise temperature control. The proprietary control system also reports any potential operating faults and provides additional detailed heater status information.

“Our new advanced electronic control helps make our commercial units more user friendly,” commented State Water Heaters Brand Manager Jeff Storie. “These new gold plated elements continue to build our brand mission of durability.”

The CSB units are available in 52, 82 and 120-gallon tanks. The SSE units are available in 10 tank sizes from 5–120-gallon tanks.

About State Water Heaters

For more than 60 years, State Water Heaters has built dependable, long-lasting water heaters for commercial and residential applications. State remains focused on manufacturing durable products that last longer. For more information, visit www.statewaterheaters.com.
