State Introduces New On-Demand Line

On-Demand Units Offer Efficient Technology and Durable Performance

Ashland City, Tenn. (December 4, 2007) – State Water Heaters today announced a new line of on-demand gas water heaters, featuring 16 different interior and exterior models designed for residential and commercial applications.

On-demand, or tankless, units provide continuous flow by igniting a burner only when the heater senses there is a demand for hot water. The high-fire burner quickly raises the temperature of the water passing through a copper heat exchanger, with no standby loss of efficiency. State on-demand units provide up to 9.8 gallons of water per minute, and offer significant energy cost savings with up to 84 percent efficiency.

State's new line features flexible water heating solutions with both interior and exterior installation options and a compact, space-saving design. The units also offer a digital temperature controller, direct electronic ignition, and on-board diagnostics and safety monitoring.

When installed in commercial applications, the products provide water heating solutions for restaurants, hotels, schools and salons. Units can be connected using simple cables for high demand applications. In addition, all indoor models feature direct vent sealed combustion for maximum safety and flexibility.

The durability and performance of the on-demand line is ensured through continuous hot water delivery and a 12-year warranty on the heat exchanger.
