### **Introducing the New, 90% Efficient Premier® Power-Vent Residential Water Heater!**

State Industries is excited to announce the introduction of the new and revolutionary Premier Power-Vent water heater as the next level of technology in residential water heating.

Now, plumbing contractors have a new option to satisfy the ever-increasing consumer demand for hot water. The new 76,000 BTU Premier Power-Vent features 90 percent thermal efficiency. It combines higher input with more efficient combustion to produce more hot water with lower operating costs. At the heart of the Premier Power-Vent's 90 percent efficient design is an internal "helical coil" heat exchanger that is designed to boost the thermal efficiency.

The 90 percent efficient Premier Power-Vent will deliver significant savings on operating costs compared to "standard" 78 percent efficient water heaters. And with 127-gallon first hour delivery and 92 GPH recovery, the hot water capability of the Premier Power-Vent rivals that of a conventional 75-gallon tank-type unit. Premier Power-Vent promises a steady stream of hot water that can provide an "endless shower" for demanding consumers.

Simplified installation gives plumbing contractors a solution for applications where an existing 40- or 50-gallon tank type unit is already installed and needs replacing. The height, diameter and placement of water and gas connections on the Premier Power-Vent unit are similar to standard 50-gallon gas units. And its power-vent design delivers tremendous installation versatility, allowing vertical or sidewall venting using 2", 3" or 4" PVC pipe up to 128 equivalent feet.

In addition, side-mounted hot and cold re-circulating taps allow the Premier Power-Vent to be installed as part of a combination space heating/potable water heating application, radiant floor heating system or any system requiring a re-circulating hot water loop.

We are excited to bring you the new Premier Power-Vent water heaters. These natural gas water heaters are available for immediate order.

Please visit our new product website at <http://www.statenewproducts.com>. We have included the press release, spec sheet, owner's manuals, product photos, and a PowerPoint presentation on the new Premier Power-Vent. For additional copies of this material, please fax your request to the fulfillment center at 615.792.8370.

We appreciate your continued support and dedication to State's line of products.
